Allowable Subject Matter

Claims 12-13, 15-20, 23, and 28-30 are allowed.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Michael Jacobs (reg. no. 41,870) on 1/16/2008.

The application has been amended as follows:

Claim 18 (currently amended) A method for operating a data processing device while using compressed data, comprising:

loading a non-compressed boot program from a first data memory into a first volatile working memory;

executing said boot program;

copying, initiated by said boot program, of a compressed application program from a second data memory into a second volatile working memory with simultaneous decompression of said application program;

starting said application program through said boot program;

Art Unit: 2115

wherein a first non-volatile memory of said data compressing device is used as said data memory of said boot program, and a second non-volatile memory of said data processing device is used as said data memory of said application program; and

further comprising locating said data processing device on a space vehicle.

Claim 19 (currently amended) A method for operating a data processing device while using compressed data, comprising:

loading a non-compressed boot program from a first data memory into a first volatile working memory;

executing said boot program;

copying, initiated by said boot program, of a compressed application program from a second data memory into a second volatile working memory with simultaneous decompression of said application program;

starting said application program through said boot program;

wherein a first non-volatile memory of said data compressing device is used as said data memory of said boot program, and a second non-volatile memory of said data processing device is used as said data memory of said application program; and

further comprising locating said data processing device in a satellite navigation receiver device.

Claim 20 (currently amended) A method for operating a data processing device while using compressed data, comprising:

loading a non-compressed boot program from a first data memory into a first volatile working memory;

Art Unit: 2115

executing said boot program;

copying, initiated by said boot program, of a compressed application program from a second data memory into a second volatile working memory with simultaneous decompression of said application program;

starting said application program through said boot program;

wherein a first non-volatile memory of said data compressing device is used as said data memory of said boot program, and a second non-volatile memory of said data processing device is used as said data memory of said application program; and

further comprising locating said data processing device in a satellite navigation receiver device of a space vehicle.

Claim 21 (cancelled)
